An Analytical Study of Five College Student Bodies

E. E. McCurry

University of Tennessee - Knoxville

Recommended Citation

McCurry, E. E., "An Analytical Study of Five College Student Bodies. " Master's Thesis, University of Tennessee, 1937.
https://trace.tennessee.edu/utk_gradthes/1049

This Thesis is brought to you for free and open access by the Graduate School at Trace: Tennessee Research and Creative Exchange. It has been accepted for inclusion in Masters Theses by an authorized administrator of Trace: Tennessee Research and Creative Exchange. For more information, please contact trace@utk.edu.

To the Graduate Council:

I am submitting herewith a thesis written by E. E. McCurry entitled "An Analytical Study of Five College Student Bodies." I have examined the final electronic copy of this thesis for form and content and recommend that it be accepted in partial fulfillment of the requirements for the degree of Master of Science, with a major in Education.

Joseph E. Avent, Major Professor

We have read this thesis and recommend its acceptance:

Benjamin O. Duggan, William E. Cole

Accepted for the Council:

Dixie L. Thompson

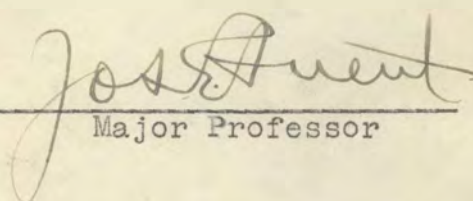

Vice Provost and Dean of the Graduate School

(Original signatures are on file with official student records.)

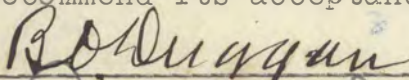

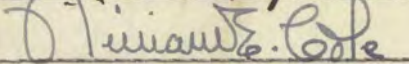

May 11, 1937

To the Committee on Graduate Study:

I submit herewith a thesis written by Mr. E. E. McCurry and entitled "An Analytical Study of Five College Student Bodies", and recommend that it be accepted for twelve quarter hours credit in partial fulfillment of the requirements for the degree of Master of Science, with a major in Education.

Major Professor

At the request of the
Committee on Graduate Study,
we have read this thesis,
and recommend its acceptance.

T. L. Linn

Accepted for the Graduate
Committee.

ACKNOWLEDGEMENTS

The writer takes pleasure in mentioning Dr. Joseph E. Avent and Dr. William E. Cole who, by their counsel and cooperation in many ways, made the questionnaire used in securing this study possible.

The writer is also indebted to President Ralph W. Lloyd of Maryville College, F. M. Massey, Dean of Men of the University of Tennessee, President James T. Warren of Carson-Newman College, President Charles C. Sherrod of East Tennessee Teachers College, and President Alexander Guerri of the University of Chattanooga for their helpful cooperation in securing the information for this study.

Many thanks are due Dr. Joseph E. Avent and Professor Benjamin O. Duggan for their helpful counsel and criticism during the period of this study.

E. E. M.

CHAPTER I

INTRODUCTION

1. Problems

The object of this investigation is six-fold: first, to evaluate organization membership in extra-curricular activities by furnishing situations and life experiences necessary for proper development of character and citizenship; second, to determine the importance of student expenses and work opportunities; third, to determine the value of the home as a factor in education; fourth, to determine the importance of educational background and economic status of the family as factors in developing best citizenship; fifth, to ascertain the value of student purposes; sixth, to find the range and extent of religious interests of students.

2. Source of data

The data utilized in this investigation have been secured as follows. Questionnaires were filled out by three thousand students at the following schools in Tennessee: University of Tennessee, Knoxville; Maryville College, Maryville; Carson-Newman College, Jefferson City; East Tennessee Teachers College, Johnson City; and University of Chattanooga, Chattanooga. The data

obtained by use of these questionnaires were tabulated on special charts designed for the purpose. Monroe High-Speed Adding-Calculator and Underwood Adding Machine were used to make the volume of necessary additions and calculations. Throughout most of this list of tables data are tabulated on companion forms; one according to sex, and the other according to the classification of students. The per cent of these groups is based on the number of students in each school except for total columns where the per cent is figured on the basis of three thousand. The foregoing procedure is followed in all tables except in TABLE LXXXVII where per cent of sex is figured on the actual number in each school, and TABLE LXXXVIII and TABLE III where the per cent answering questions is figured on the basis of the actual number in that particular class. In the total columns the per cent is figured on the basis of sex totals for all schools.

3. Limitations of data

It is recognized that some differences naturally exist between the students of state schools and private church schools, inasmuch as the state schools are likely to have a student body composed chiefly of students local to the state, while the private church school draws students from a wider area. However, the total should be

representative of the average university or college in America since these students come from more than thirty-five different states and countries. For unknown reasons an occasional unmarked blank was found on a few questionnaires. The questionnaires are believed, however, to give reliable information, because only four were found with any evidence of deliberate misrepresentation; these were not accepted. These results, therefore, should be representative of the typical American liberal arts college or university.

It is hoped that the facts thus obtained will be of general educational value and more specifically to the schools from which these data were obtained.

CHAPTER II

EXTRA-CURRICULAR ACTIVITIES AS FACTORS IN HIGHER EDUCATION

The following pages will be devoted to a study of extra-curricular activities as factors in higher education. The first item under the above heading is Boy Scouts (TABLE I). The scout movement is international in scope, and has been a stabilizing influence in the lives of hundreds of thousands of boys during that changing period of life when a boy needs a guide. The American¹ division of Boy Scouts was chartered in 1910. Since that date it has, through a remarkable growth, been able to provide wholesome activities for many thousands of boys. Of the three thousand college and university students, eight hundred thirty-nine have had scout experience. Of this number thirteen were girls. The number amounts to 27.97 per cent of the total. Three hundred thirty-three of these students were freshmen, two hundred twenty-four were sophomores, one hundred fifty-five were juniors and the remaining one hundred twenty-eight were seniors (TABLE III).

Of the freshman class 29.29 per cent have had Boy Scout experience. The per cent of the sophomore class falls below the freshman with 26.11 per cent, while the juniors show an increase over the sophomores. The seniors show 30.77 per cent with Boy Scout experience, which indicates that the training in this organization has been a positive factor in higher education.

The Girl Scout movement was started in American immediately after the Boy Scout movement and has achieved great popularity². This organization has a total membership (TABLE I) of four hundred twenty-three out of three thousand, or 14.1 per cent. Of this number eleven are boys. In (TABLE II) the membership is shown by classification with the per cent of three thousand in each class. In TABLE III the total number in each class has been listed under each school and the number of Girl Scouts in each class, showing the per cent according to class and school. The freshman class shows a total membership of one hundred eighty-five or 16.27 per cent of all freshmen. The sophomore total for all schools listed shows a membership of one hundred eighteen, or 13.75 per cent of all sophomores. The junior class total in all schools shows seventy-five with Girl Scout membership, or 12.73 per cent. A total of forty-five with senior classification amounts to 10.82 per cent of all seniors in the different schools. These data indicate negative value as a factor in higher education. Only 14.1 per cent of three thousand students are Girl Scouts.

The Sunday School movement first started by John Wesley, and later revised by Robert Raikes³ of England (1780), has a favored place in the activities program of youth. Twelve hundred thirty-three men report Sunday School experience (TABLE I) or membership. This is 41.1 per cent of the total of three thousand. Eleven hundred

seventy-eight women report Sunday School membership. This is 39.27 per cent of the entire group. In TABLE II Sunday School membership is shown by school and by class within each school, total and per cent worked out for each. Out of three thousand the total number in all schools reporting Sunday School membership was twenty-four hundred eleven, or 80.37 per cent of the entire three thousand.

The total number (TABLE III) from each school divided among the different classes is shown with the per cent of each class, and totals and percentages of all classes. Out of eleven hundred thirty-seven freshmen, nine hundred four, or 79.51 per cent, report Sunday School membership. The sophomores show an increase in membership over the freshmen. Out of eight hundred fifty-eight, six hundred eighty-nine report Sunday School membership. Out of five hundred eighty-nine juniors four hundred seventy-two, or 80.14 per cent report Sunday School membership. Out of a total of four hundred sixteen seniors three hundred forty-six, or 83.17 per cent report Sunday School membership. This increase, which has been steady between the freshman and senior years, indicates that Sunday School membership is a positive factor in higher education.

Item number four in TABLE I shows the number of men in these colleges who have had football experience in high school. Then under college is listed the number of men on college and university football squads. It should be

stated, however, that these tables do not represent in numbers the entire football squad or the entire student body. The first football club⁴ was organized at Boston in 1862. Columbia, Harvard, Princeton and Yale were among the first schools to sponsor American Football.⁵ The game has attained great popularity as an inter-collegiate sport. TABLE I shows a total of five hundred thirty-five with high school football experience. Seven of this number were girls. The number and per cent listed under each school and each class within these schools with football experience is shown in TABLE II.

Item four of TABLE III shows that two hundred twenty-three of eleven hundred thirty-seven freshmen, or 19.61 per cent, have been members of high school football teams. Only one hundred thirty-two of eight hundred fifty-eight sophomores, or 15.38 per cent, report membership on high school teams. The juniors have one hundred six out of five hundred eighty-nine, or 18. per cent, with high school football team membership. Only seventy-four seniors out of four hundred sixteen, or 17.79 per cent, report membership on high school teams. These data indicate that high school football experience is a negative factor in higher education, as related to student life in extra-curricular activities program. Thirty-three out of eleven hundred thirty-seven freshmen, or 2.9 per cent, report membership on collegiate football teams. Thirty out of eight hundred fifty-eight

sophomores report membership on college football teams. Thirty-one out of five hundred eighty-nine juniors report membership on college or university football teams. This number is 7.45 per cent of seniors who filled out questionnaires. These data indicate that college and university football is a positive factor in higher education.

The fifth item of TABLE I indicates that baseball receives much less attention in high school than football. Also, that it is participated in by a greater number of girls than take part in football. Four hundred eighty-one, or 16.03 per cent of three thousand, report membership on high school baseball teams. Of this number one hundred four are girls. A total of ninety-seven out of three thousand report membership on college or university baseball teams. The per cent is 3.23, and thirty-seven of the ninety-seven are girls. Item five of TABLE II shows high school baseball team membership to be a negative factor in higher education. Nevertheless, college and university experience on baseball teams, with relation to the entire number of three thousand, indicates a positive value as a factor in higher education (TABLE II). TABLE III shows that three hundred five out of eleven hundred thirty-seven have been members of high school baseball teams. This is 18.03 per cent of all freshmen. One hundred fifteen, or 13.4 per cent of sophomores have been members of high school baseball teams. Ninety-five juniors out of a total of five

hundred eighty-nine, or 16.13 per cent, have been members of high school baseball teams. Sixty-five, or 15.63 per cent of four hundred sixteen seniors, have been members of high school baseball teams. A total of four hundred eighty-one, or 16.03 per cent of three thousand, have been members of high school baseball teams. Nineteen, or 1.67 per cent, of eleven hundred freshmen have been members of college or university baseball teams. Twenty-one, or 2.45 per cent, of sophomores have also been members of such teams. Twenty-two, or 3.74 per cent, of five hundred eighty-nine juniors have been members of college or university baseball teams. While the number of seniors is usually less, an increase to thirty-five, or 8.41 per cent, is shown for the seniors. In the entire group of three thousand, ninety-seven report membership on college or university baseball teams. These data indicate that membership on high school baseball teams is a negative factor in higher education, while membership on college and university baseball teams is a positive factor in higher education.

Item number six (TABLE I) shows one hundred eighty-eight, or 6.27 per cent, with membership on high school swimming teams. Of this number fifty-nine are girls. Forty-one, or 1.37 per cent, report membership on swimming teams for men. Twenty-six, or .87 per cent, of the girls report membership on college or university swimming teams. TABLE II gives the number and per cent of each classifica-

tion under both high school and college. This shows a total of one hundred eighty-eight, or 6.27 per cent, with membership on high school swimming teams. Sixty-seven, or 2.23 per cent, of the three thousand, report membership on college or university teams.

Item six on page two of TABLE III shows seventy-nine, or 6.95 per cent, of eleven hundred thirty-seven freshmen, report membership on high school swimming teams. Fifty-two, or 6.06 per cent, of sophomores report membership on high school swimming teams. Only thirty-five, or 5.94 per cent, of juniors report membership on high school swimming teams. Twenty-two, or 5.29 per cent, of four hundred sixteen seniors report membership on high school swimming teams. These make a total of one hundred eighty-eight, or 6.2 per cent of three thousand students, reporting membership on high school swimming teams. Fourteen, or 1.23 per cent of eleven hundred thirty-seven freshmen, report membership on college or university swimming teams. Sixteen, or 1.86 per cent of eight hundred fifty-eight sophomores, report membership on college or university swimming teams. Twenty-four, or 4.07 per cent of a total of five hundred eighty-nine juniors, report membership on college or university swimming teams. Thirteen, or 3.13 per cent of seniors out of four hundred sixteen, report membership on college or university swimming teams. The total for all college classes is sixty-seven, or 2.23 per cent. These data show membership on high school

swimming teams to be a negative factor in higher education. These data also show membership on college or university swimming teams to be a positive factor in higher education.

Item number seven of TABLE I shows the number and per cent of each sex in each school with membership on basketball teams. Nine hundred thirteen, or 30.43 per cent of three thousand, have been members of high school basketball teams. Of this number three hundred ninety-seven were girls. One hundred fifty-six, or 5.2 per cent of three thousand, report membership on college or university basketball teams. Of this number sixty-eight are girls. Item seven in section two of TABLE II shows the number and per cent of students who have been members of high school and college or university teams according to classification. This shows that three hundred fifty-five, or 11.83 per cent of three thousand, have been members of high school basketball teams before they were college or university freshmen. Two hundred thirty-six sophomores, or 7.87 per cent, have been members of high school basketball teams. One hundred eighty-eight juniors, or 6.27 per cent, reported membership on high school basketball teams. One hundred thirty-four seniors, or 4.47 per cent of three thousand, reported membership on high school basketball teams. Thirty-one freshmen, or 1.03 per cent of three thousand, reported membership on college or university basketball teams. Thirty-five sophomores, or 1.17 per cent, reported membership on college or university basketball teams. Forty-nine juniors, or 1.63 per cent of the group of three

thousand, reported membership on college or university basketball teams. Forty-one seniors, or 1.37 per cent of three thousand, reported membership on college or university basketball teams.

Item seven in section two of TABLE III gives the totals of each class under each school. At the top of the same page is listed the number in classes at each school, with the totals at the right side of the page. Three hundred fifty-five, or 31.22 per cent of eleven hundred thirty-seven freshmen, reported membership on high school basketball teams. Two hundred thirty-six sophomores, or 27.51 per cent of eight hundred fifty-eight, reported membership on high school basketball teams. One hundred eighty-three, or 31.92 per cent of five hundred eighty-nine juniors, report membership on high school basketball teams. One hundred thirty-four, or 32.21 per cent of four hundred sixteen seniors, report membership on high school basketball teams. A total of nine hundred thirteen, or 30.43 per cent of three thousand, reported membership on high school teams. Thirty-one, or 2.73 per cent of eleven hundred thirty-seven freshmen, report membership on college or university basketball teams. Thirty-five, or 4.08 per cent of eight hundred fifty-eight sophomores, report membership on college or university basketball teams. Forty-nine, or 8.32 per cent of five hundred eighty-nine juniors, report membership on college or univer-

sity basketball teams. Forty-one, or 9.86 per cent of four hundred sixteen seniors, report membership on college or university basketball teams. The total number of players on college or university basketball teams is one hundred sixty-six, or 5.2 per cent of three thousand. These data indicate that membership on high school basketball teams is a negative factor in higher education; however, they would not make possible a very strong negative curve. These data on college and university basketball team membership indicate that it is a positive factor in higher education.

Item number eight of TABLE I shows that three hundred eighty-eight, or 11.27 per cent of three thousand, reported membership on high school track teams. Of this number forty-eight, or 1.6 per cent, were girls. One hundred, or 3.33 per cent of three thousand, reported membership on college or university track teams. Of this number nineteen were girls. Item eight in section two of TABLE II gives the number and per cent by class under each school for both high school and college or university. These totals give the per cent of three thousand. Three hundred thirty-eight, or 11.27 per cent of three thousand, report membership on high school track teams. A total of one hundred, or 3.33 per cent, report membership on college or university track teams. These data show that membership on high school track teams is a positive factor in

higher education. They also show that membership on a college or university track team is a much stronger positive factor in higher education than the membership on high school teams.

Item number nine in section two of TABLE I shows two hundred seventy-one, or 9.03 per cent of three thousand, have been members of high school tennis teams. Of this number ninety-one were girls. Fifty-one, or 1.7 per cent, reported membership on college or university tennis teams. Of this number fifteen were girls. Item number nine in section two of TABLE II gives the list in each class under each school and also their totals on the right side of the page. With these totals the per cent of three thousand has been worked out for each number.

Item number nine in section three of TABLE III shows totals and per cent for each class. One hundred eight, or 9.5 per cent of eleven hundred thirty-seven freshmen report membership on high school tennis teams. Seventy-nine, or 9.21 per cent of eight hundred fifty-eight sophomores, report membership on high school tennis teams. Fifty-three, or 9. per cent of five hundred eighty-nine juniors, report membership on high school tennis teams. Thirty-one, or 7.45 per cent of four hundred sixteen seniors, report membership on high school tennis teams. Eight, or .7 per cent of eleven hundred thirty-seven freshmen, report membership on college or university tennis teams. Thirteen,

or 1.52 per cent of eight hundred fifty-eight sophomores, report membership on college or university tennis teams. Eighteen, or 3.06 per cent of five hundred eighty-nine juniors, report membership on college or university tennis teams. Twelve, or 2.88 per cent of four hundred sixteen seniors, report membership on college or university tennis teams. These data indicate that membership on a high school tennis team is a negative factor in higher education. These data also show that membership on a college or university tennis team is a positive factor in higher education.

Item ten in section two of TABLE I shows a total of seventy-four, or 2.47 per cent of three thousand, report membership on high school wrestling teams. Of this number three are girls. Thirty-four, or 1.14 per cent of three thousand, report membership on college or university wrestling teams. Of this number two are girls. Item ten in sections two and three of TABLE II show the number and per cent of each class in each school with membership on either high school or college wrestling teams. This table shows the number under each classification and gives the per cent of the total number of three thousand.

Item ten in section three of TABLE III shows the number and per cent of each class in each school that have been members of wrestling teams, either in high school or college. This table also gives totals for each class on

the right side of the page. Twenty-two, or 1.93 per cent of eleven hundred thirty-seven freshmen, report membership on high school wrestling teams. Nineteen, or 2.21 per cent of eight hundred fifty-eight sophomores, report membership on high school wrestling teams. Sixteen, or 2.72 per cent of five hundred eighty-nine juniors, report membership on high school wrestling teams. Seventeen, or 4.09 per cent of four hundred sixteen seniors, report membership on high school wrestling teams. The total number with this high school experience is seventy-four, or 2.47 per cent of three thousand. Six, or .53 per cent of eleven hundred thirty-seven freshmen, report membership on college or university wrestling teams. Five, or .58 per cent of eight hundred fifty-eight sophomores, report membership on college or university wrestling teams. Twelve, or 2.04 per cent of five hundred eighty-nine juniors, report membership on college or university wrestling teams. Eleven, or 2.64 per cent of four hundred sixteen seniors, report membership on college or university wrestling teams. The total number of these is thirty-four, or 1.13 per cent of three thousand. These data show that membership on both high school and college or university wrestling teams is a positive factor in higher education. Contrary to facts, previously observed, concerning membership on most of high school teams, wrestling appears to be a greater positive factor in higher education than membership on most of college or university teams.

Item eleven in section two of TABLE I shows five hundred fifty-four, or 15.13 per cent of three thousand, reporting membership on high school debate teams. Of this number one hundred seventy-seven, or 5.9 per cent of three thousand are girls. Ninety, or 3. per cent of three thousand, report membership on college and university debate teams. Of this number twenty-nine are girls. Item eleven in section three of TABLE II shows the total number of each class and the per cent of persons reporting membership on these high school teams. The total membership on college or university teams is reported in these columns in the same way.

TABLE III shows the number in each class at each school with the totals for these classes in all schools listed. The per cent here refers to the total under each class and not of three thousand as it has been worked out on TABLE II. One hundred sixty-nine, or 14.86 per cent of eleven hundred thirty-seven freshmen (TABLE III), report membership on high school debate teams. One hundred thirty, or 15.15 per cent of eight hundred fifty-eight sophomores, report membership on high school debate teams. Eighty-three, or 14.09 per cent of five hundred eighty-nine juniors, report membership on high school debate teams. Seventy-two, or 17.31 per cent of four hundred sixteen seniors, report membership on high school debate teams.

Five, or .44 per cent of eleven hundred thirty-seven freshmen (TABLE III), report membership on college or

university debate teams. Twenty, or 2.33 per cent of eight hundred fifty-eight sophomores, report membership on college or university debate teams. Thirty-three, or 5.06 per cent of five hundred eighty-nine juniors, report membership on college or university debate teams. Thirty-two, or 7.69 per cent of four hundred sixteen seniors, report membership on college or university debate teams. These data indicate that membership on both high school and college or university debate teams is a positive factor in higher education. In this case membership on college and university debate teams is a much stronger positive factor than membership on the high school debate teams.

Item number twelve in section two of TABLE I shows the total of one hundred eighty-six, or 6.2 per cent of three thousand, reporting experience as high school orators. Of this number fifty-eight were girls. Item twelve in section three of TABLE II shows a decrease in the percent of college enrollment reporting experience as college or university orators between the freshman and senior classes. Twelve, or .4 per cent of ~~three~~ thousand, report experience as college orators. The increased per cent reporting as college orators is little more than the per cent of decrease shown by high school orators.

Item number twelve in section four of TABLE III shows that seventy-nine, or 6.95 per cent of eleven hundred thirty-seven freshmen, report experience as high school orators. Forty-eight, or 5.59 per cent of eight hundred

fifty-eight sophomores, report **experience** as high school orators. Twenty-nine, or 4.92 per cent of five hundred eighty-nine juniors, report **experience** as high school orators. Thirty, or 7.21 per cent of four hundred sixteen seniors, report **experience** as high school orators. One, or .09 per cent of eleven hundred thirty-seven freshmen, report **experience** as college or university orators. Four, or .47 per cent of eight hundred fifty-eight sophomores, report **experience** as college or university orators. Four, or .68 per cent of five hundred eighty-nine juniors, report **experience** as college or university orators. Three, or .72 per cent of four hundred sixteen seniors, report **experience** as college or university orators. These data indicate that **experience** as a high school orator is not a positive factor in higher education. Very little can be said in favor of college and university **experience** as an orator; however, the per cent does increase enough between the freshman and senior years to make it positive.

Item number thirteen in section two of TABLE I shows that three hundred twenty-three, or 10.77 per cent of three thousand, report membership in high school bands. Of this total number forty-two are girls. Item thirteen in section three of TABLE II shows a gradual decrease in both number and per cent of three thousand with high school band **experience** between the freshman and senior classes. The decrease in number and per cent reporting membership in

college or university bands is noticeable.

One hundred eighteen, or 10.38 per cent of eleven hundred thirty-seven freshmen, report membership in high school bands. Ninety-four, or 10.96 per cent of eight hundred fifty-eight sophomores, report membership in high school bands. Sixty-three, or 10.7 per cent of five hundred eighty-nine juniors, report membership in high school bands. Forty-seven, or 11.3 per cent of four hundred sixteen seniors, report membership in high school bands. Thirty-three, or 2.9 per cent of eleven hundred thirty-seven freshmen, report membership in college or university bands. Thirty-two, or 3.73 per cent of eight hundred fifty-eight sophomores, report membership in college or university bands. Thirty-four, or 5.77 per cent of five hundred eighty-nine juniors, report membership in college or university bands. Thirty, or 7.21 per cent, of four hundred sixteen seniors, report membership in college or university bands. These data indicate that both high school and college or university band experience is a positive factor in higher education; however, college or university band experience has a much greater value.

Item fourteen in section two of TABLE I shows a total of three hundred twenty-two, or 10.73 per cent of three thousand, reporting membership in high school orchestras. Of this number one hundred, or 3.7 per cent of three thousand, are girls. One hundred eleven, or 3.7 per cent of three thousand, report membership in college or univer-

sity orchestras. Of this number thirty-six are girls. Item fourteen in section four of TABLE II shows a decrease in number and per cent between the freshman and senior years in the number reporting orchestra experience. The number and per cent reporting membership in college or university orchestras shows a marked increase between the freshman and senior years.

One hundred seven, or 9.41 per cent of eleven hundred thirty-seven freshmen, report membership in high school orchestras. One hundred two, or 11.89 per cent of eight hundred fifty-eight sophomores, report membership in high school orchestras. Seventy, or 11.88 per cent of five hundred eighty-nine juniors, report membership in high school orchestras. Forty-three, or 10.34 per cent of four hundred sixteen seniors, report membership in high school orchestras. Twenty-four, or 2.11 per cent of eleven hundred thirty-seven freshmen, report membership in college or university orchestras. Twenty-nine, or 3.38 per cent of eight hundred fifty-eight sophomores, report membership in college or university orchestras. Thirty-three, or 5.6 per cent of five hundred eighty-nine juniors, report membership in college or university orchestras. Twenty-five, or 6.01 per cent of four hundred sixteen seniors, report membership in college or university orchestras. These data indicate that membership in both high school and college or university orchestras is of educational value. These facts indicate that membership in college or university orchestras

has a greater positive value.

Item number fifteen in section three of TABLE I shows that eleven hundred twenty-nine, or 37.63 per cent of three thousand, participated in other high school activities. Of this number five hundred eighty-six were girls. Five hundred twenty-five, or 17.5 per cent of three thousand, participated in other college or university activities. Of this number two hundred ninety-nine were girls. Item number fifteen in section number four of TABLE II shows both the number and per cent of persons participating in other high school activities decreasing between the freshman and senior years. This decrease is based on the total of three thousand. The increase in per cent between the freshman and senior classes for other college or university activities is very small.

Item number fifteen in section five of TABLE III shows that four hundred sixty, or 40.46 per cent of eleven hundred thirty-seven freshmen, report participation in other high school activities. Three hundred ten, or 36.13 per cent of eight hundred fifty-eight sophomores, report participation in other high school activities. Two hundred twenty-two, or 37.69 per cent of five hundred eighty-nine juniors, report participation in other high school activities. One hundred thirty-seven, or 32.93 per cent of four hundred sixteen seniors, report participation in other high school activities. One hundred twenty-six, or 11.08 per

cent of eleven hundred thirty-seven freshmen, report participation in other college or university activities. One hundred twenty-nine or 15.03 per cent of eight hundred fifty-eight sophomores, report participation in other college or university activities. One hundred fifty-six, or 26.49 per cent of five hundred eighty-nine juniors, report participation in other college or university activities. One hundred fourteen, or 27.4 per cent of four hundred sixteen seniors, report participation in other college or university activities. Five hundred twenty-five, or 17.5 per cent of three thousand, participated in other college or university activities. These data indicate that participation in other high school activities is a negative factor in higher education, while participation in other college or university activities is a marked positive factor.

Conclusion

These data indicate that most of high school activities have a negative value as a factor in higher education. The fact that most of high school activities have a negative value as a factor in higher education would by no means justify the discontinuing of these activities in high school, because they have organization, guidance, and other values in the school organization. It is interesting to note that almost all college and university activities have a positive value as shown by totals and percentages in sections one

to rive of TABLE III.

CHAPTER III

ITEMS OF EXPENSE IN COLLEGES AND UNIVERSITIES

The cost item is one of consideration in every phase of education from the time the child enters the primary school. In conducting these primary schools the quality of a well organized school is some times sacrificed for the sake of economy. The primary school certainly does not monopolize this economy. The elementary and high schools suffer alike with the primary schools. The salaries are not in keeping with standards of living expected of teachers, nor are they high enough to make the teaching profession attractive to many best qualified for teaching. These salary scales in many places make additional preparation almost impossible for a large number now in the teaching profession. In this chapter, however, we shall deal entirely with the cost items in colleges and universities.

TABLE IV shows the annual cost of transportation for students of different schools. One thousand four of three thousand pay less than thirty dollars per year for transportation. This is 33.47 per cent of the total number. The next highest number--two hundred thirty-two, or 7.73 per cent of three thousand--pay between thirty and thirty-nine dollars. The decrease in number and per cent is constant between thirty and one hundred ten dollars listed as transportation costs. This indicates that a

large per cent of students attend school near home. The same information on transportation is given in TABLE V by classification rather than sex.

TABLE VI shows more students paying between forty and forty-nine dollars per year for rooms than any other amount between thirty and one hundred forty dollars. Four hundred ninety-six, or 16.53 per cent of three thousand, list their room rent between these figures. One hundred seventy-seven of this number are girls. There is a gradual decrease in per cent as the price goes up. Sections one and two of TABLE VII give this information by classification for the different schools, with the totals for each class on the right side of the page.

Sections one and two of TABLE VIII show one hundred twenty dollars to ~~one~~ hundred twenty-nine ~~dollars~~ to be the modal price to pay for board per school year. Four hundred fifty-two, or 15.07 per cent of three thousand, pay this amount. The next most popular figure is one hundred sixty to one hundred sixty-nine dollars ~~for~~ the school year. Four hundred eleven, or 13.7 per cent of three thousand, pay this amount. In sections one to four of TABLE IX the number and per cent of students paying different amounts of board in different schools, distributed by school and classification, are shown. The Maryville College group makes one hundred twenty to one hundred twenty-nine dollars the modal figure in ~~number~~ and per cent. The University

of Tennessee makes one hundred sixty to one hundred sixty-nine dollars take the next most popular place on the curve. From these two high points the number and per cent decline in both directions.

TABLE X shows the number spending different amounts for laundry. Three hundred fifty-two, or 11.73 per cent of three thousand, spend less than ten dollars on laundry for the school year. Of this number two hundred five are girls. Three hundred fifty-four, or 11.8 per cent of three thousand, spend between ten and fourteen dollars for laundry. Of this number one hundred seventy-five are girls. Three hundred thirty-eight, or 11.27 per cent of three thousand, spend between fifteen and nineteen dollars per school year for laundry. Of this number one hundred are girls. Other groups paying higher prices are less than 6 per cent of the three thousand. Sections one and two of TABLE IX show the number and per cent of each class in each school paying different amounts for laundry service, with totals per class on the right side of the page.

One of the most interesting and important things about colleges and universities is student use of textbooks. TABLE XII shows the cost of textbooks to students in different schools by sex. Six hundred sixty-two, or 22.07 per cent of three thousand, pay less than thirteen dollars per school year for books. Of this number three hundred forty-nine are girls. More than one thousand pay

between twenty and thirty-four dollars per year for books. This includes the groups paying between twenty and twenty-four dollars, twenty-five and twenty-nine dollars, and thirty and thirty-four dollars. Only one hundred one, or 3.37 per cent of three thousand, pay above fifty dollars per school year for books. TABLE XIII gives the number and per cent of students in different schools spending different amounts for books by class. Classification totals are on the right side of the page.

Sections one and two of TABLE XIV (a) show the amount paid for tuition in different schools by sex. Six hundred eighty-nine, or 22.97 per cent of three thousand, pay between seventy-five and seventy-nine dollars per school year for tuition. Of this number three hundred sixty-eight are girls. Four hundred thirteen, or 13.76 per cent of three thousand, pay between ninety and ninety-four dollars per school year for tuition. Three hundred thirty-eight, or 11.27 per cent of three thousand, pay less than seventy-five dollars per school year for tuition. Groups paying other amounts are small. Special courses paid for in addition to the regular tuition may explain lack of uniformity of tuition costs in any one of the schools listed. Sections one and two of TABLE XIV (b) show the number and per cent paying different amounts of tuition in different schools by class. Classification totals as well as grand totals may be found on the right side of the page.

TABLE XV (a) shows the amounts paid as club dues by the students of the different schools. Five hundred eighty-five, or 19.5 per cent of three thousand, report that they pay less than five dollars per school year for club dues. Of this number three hundred thirty-six are girls. One hundred seventy-eight, or 5.93 per cent of three thousand, report that they pay between five and nine dollars per school year for club dues. The total number of students with membership in clubs is less than one thousand. Sections one and two of TABLE XV (b) give the number and per cent of students in each school paying club dues. On this table the distribution is made according to school and class. It is noticeable that the largest group paying club dues pays below five dollars and that the next largest group pays between five and nine dollars. In the first group the number and per cent decreases greatly between freshman and senior years in four schools and shows a marked increase between freshman and senior years in one. In the second group an increase is shown in three out of five schools and a decrease in the other two.

Information concerning fees cannot correspond accurately between schools because of the catalog requirements and expense groupings of different schools. Sections one and two of TABLE XVI (a) show cost of school fees in different schools by sex. Three hundred ninety-eight, or

13.27 per cent of three thousand, pay between twenty and twenty-nine dollars per school year for fees. Three hundred eighty-four, or 12.8 per cent of three thousand, pay between ten and nineteen dollars. Two hundred ninety-five, or 9.83 per cent of three thousand, pay less than ten dollars per school year for fees. Two hundred four, or 6.8 per cent of three thousand, pay between one hundred thirty and one hundred thirty-nine dollars per school year for fees. Other groups paying different amounts range in number from fourteen to one hundred sixty-eight. Sections one and two of TABLE XVI (b) give the same general totals but show distribution by class instead of sex. Classification totals are on the right side of the page.

TABLE XVII shows the cost of fraternities and sororities to **students** in different schools by sex. The number and per cent in the different schools is noticeably small. Two hundred sixty-one, or 8.7 per cent of three thousand, pay less than twenty-five dollars. One hundred twenty, or 4. per cent of three thousand, pay above seventy dollars per school year. Other groups paying different amounts between the **lowest** and highest are very small. Fraternities and sororities are **more** popular at the University of Tennessee and the University of Chattanooga than in other institutions studied. Sections one and two of TABLE XVIII show these annual costs according to number and per cent in each class of each school with classification

totals and grand totals on the right side of the page. It is again noticeable that the number and per cent in the group paying under twenty-five dollars decreases between the freshman and senior years in four out of five schools. The writer observes nothing in this table that would explain this decrease. It is possible, however, that student interests may be absorbed in other things or that lack of time prevents continuation in these organizations.

TABLE XIX shows the cost of incidentals to students in different schools by sex. Six hundred thirty-two, or 21.07 per cent of three thousand, pay less than twenty-five dollars per school year for incidentals. Of this number two hundred ninety-nine are girls. As the scale for amount paid for incidentals increases the per cent of students paying these amounts gradually decreases. Sections one and two of TABLE XX show the number and per cent in each class of each school paying different amounts for incidentals. This table gives class totals and grand totals for each group.

Sections one and two of TABLE XXI show the number and per cent listing different annual school expenditures by sex. It is interesting to note that each school is represented by one or more students spending different amounts between one hundred twenty-five and five hundred forty-nine dollars per school year for total expenses. The per cent in each group is small, usually less than 6 per cent and

above 3 per cent. Sections one to four of TABLE XXII show the number and per cent in each class of each school, with the classification totals and grand totals on the right side of the page. The number in each group spending less than five hundred forty-nine dollars is rather evenly distributed. Living at home, economy, and skilful management of financial problems likely plays an important part in making this distribution noticeably even.

Sections one and two of TABLE XXIII show the amount of expenses earned in different school by sex. Three hundred twenty-seven, or 10.9 per cent of three thousand, report earnings at school between fifty and ninety-nine dollars. Three hundred three, or 10.1 per cent of three thousand, report earnings at school between one hundred and one hundred forty-nine dollars. One hundred eighty-one, or 6.03 per cent of three thousand, report earnings less than fifty dollars. Less than half of these numbers are girls. As the scale of earnings increases the number participating in the earnings decreases from ninety-three to one. Fifteen, or .5 per cent of three thousand, earn some amount between five hundred and five hundred forty-nine dollars. Sections one to three of TABLE XXIV summarize this information according to each class in each school, with classification totals and grand totals on the right side of the page. It is interesting to note that opportunities for student work is given at each school.

It is the writer's opinion that this work has an educational value as well as an earning value.

Sections one and two of TABLE XXV show the different amounts earned during vacation by students in different schools by sex. Three hundred twenty-five, or 10.83 per cent of three thousand, report earnings during vacation between fifty and ninety-nine dollars. Two hundred twelve, or 7.07 per cent of three thousand, report earnings during vacation of amounts under fifty dollars. Two hundred thirty-nine, or 7.97 per cent of three thousand, report earnings between one hundred and one hundred forty-nine dollars. As the scale of earning increases, the number and per cent participating decreases. Very few report earnings above four hundred fifty dollars. Sections one to three of TABLE XVI show the number participating in earnings during vacation according to each class in each school. The classification totals, with the grand totals, showing the per cent of each, may be found on the right side of the page. Not many exceed four hundred fifty dollars in vacation earnings, and the University of Tennessee has the lead in the number reporting these earnings.

Sections one and two of TABLE XXVII show the range of amounts borrowed by students in different schools according to sex. Seventy-nine, or 2.63 per cent of three thousand, report amounts of fifty dollars or less borrowed for school expenses. One hundred fifty-five, or 5.17 per

cent of three thousand, report amounts between fifty and ninety-nine dollars borrowed for school expenses. One hundred sixty-seven, or 5.57 per cent of three thousand, report amounts borrowed between one hundred and one hundred forty-nine dollars for school expenses. Other groups borrowing different amounts are less than one hundred in number, and as the scale for borrowing increases the number participating decreases. Sections one to three of TABLE XXVIII show the number and per cent of students in each school borrowing money to meet expenses for the school year, by classification. The number and per cent borrowing different amounts in each class of each school is shown here, with the classification totals and grand totals on the right side of the page.

Conclusion

These data indicate that the majority of students live within the region where these schools are located, although many come from a distance. The prices paid for rooms indicate that some students room at home while the majority stay in dormitories or rooming houses. The price range of board indicates that the majority of students in these schools are economical in their expenditures. Tables on the annual cost of laundry indicate that many students have their laundry done at home without expense and more than half of those paying for laundry pay

a very nominal charge. The variation in price paid for books in the different schools indicates that there is no definite requirement made concerning this item. The range of amounts paid for tuition in different schools indicates that a number of students take special courses.

The information concerning club membership indicates that less than one thousand students in these schools are members of clubs. Amounts of fees indicate lack of uniformity in student activities for which these fees are paid. The number paying for fraternities and sororities indicate that fewer than one thousand out of three thousand hold membership in these organizations. Incidentals also vary greatly in number of students and amounts paid in the different schools. Total annual expenditures listed in TABLE XXI is a summary of other tables on expenses.

Amounts of expenses earned at school and during summer vacation are definite indications of the willingness of American youth to aid themselves. The number of students borrowing different amounts is a public expression of confidence in youth.

CHAPTER IV

THE HOME AS A FACTOR IN HIGHER EDUCATION

It would be impossible to make the subject of this chapter suggest a small number of the "legion" of factors that help to make a home a positive or a negative factor in higher education. It is the purpose of this chapter to take the reader into, not one home, but many homes of American students.

TABLE XXIX shows the number and per cent of students who have parents living, dead, divorced, or deserted, according to school. The per cent between the total columns at the right side of the page shows very little difference between male and female. TABLE XXX gives the same information in totals but treats it according to class standing in school instead of sex. There is a marked decrease between the freshman and the senior years in the per cent of students who have parents living. This table also shows that a very small per cent of college and university students come from broken homes. These data indicate that many students are forced to abandon study and assume the family responsibilities of earning a living.

TABLE XXXI (a) shows the number and per cent of students in these schools who help to support one or more dependents. The total number reporting such aid amounts to 7.2 per cent (TABLE XXXI (b)). This table also shows a correlation between four of the schools in the decrease

or per cent between freshman and senior years in the number reporting that they do not help support dependents.

TABLE XXXIII shows the profession of students' parents. Item three in section one of this table shows that 22.2 per cent of three thousand students are farmers' children. In 1930, 43.8 per cent of our population was rural.¹ The merchants send the next highest per cent (11.6) of three thousand. Salesmen send 7.17 per cent and only two other professions are represented by more than 5. per cent. Many of these professions do not make partnerships possible. TABLE XXXIII shows the total partnerships to be 18.53 per cent. TABLE XXXIV shows that these partnerships decrease in per cent between freshman and senior years.

TABLE XXXV shows the number and per cent of students whose parents own the business where they work to be 38.13 per cent. This, of course, is in addition to per cent of partnerships reported in TABLE XXXIV. TABLE XXXVI shows the business ownership by class. It is interesting to note that this ownership shows a marked decrease between the freshman and senior years. TABLE XXXIV shows the percentage decrease between freshman and senior parents owning part of the business. Also TABLE XXXVI shows that the student percentage decrease between freshman and senior years is less for students whose parents own the business where they work than for non-owners. These data indicate that parent ownership and partnership in business where

they work are positive factors in higher education. The partnership, as you would expect, has less positive value than ownership, as indicated on these tables.

TABLE XXXVII shows that 75.17 per cent of three thousand students live in homes owned by parents, while 20.2 per cent of students live in rented homes. TABLE XXXVIII treats the same material by class in the different schools that the preceding table shows according to sex. Comparative data on students living in owned and rented homes show that those living in owned homes decrease less in per cent between freshman and senior classes than the students living in rented homes. These data indicate that home ownership is also a positive factor in higher education.

Sections one and two of TABLE XXXIX show the number and per cent of students reporting different amounts of rent paid by their families. This information was tabulated according to sex. TABLE XL shows this same information tabulated according to class in each school. The largest number that pay any given rent is sixty-three, or 2.1 per cent of three thousand. These tables do not appear to show any important factor in education, either positive or negative.

TABLE XLI and TABLE XLII show number and per cent of students reporting different sources of water supply for their homes. Sixteen hundred fifty-one, or 55.03 per cent of three thousand, report use of city water. This

corresponds closely to Thompson's estimate of rural and urban population.²

Sections one and two of TABLE XLIII and TABLE XLIV show that the most popular size of home is the six-room house. The total number of students living in this size house is five hundred thirty-seven, or 17.9 per cent of three thousand. The seven-room house comes next in number and per cent. The large home, however, has not gone entirely out of use. TABLE XLV shows the trend of the age toward electrification of the home. The use made of all the new electrical equipment has a tendency to make servants less necessary, and enables the average family to do with less room space in the home. Only two hundred thirteen students out of three thousand report no electrical equipment in their homes. The most popular value listed is three hundred twenty-five to three hundred forty-nine dollars, shown in section two of TABLE XLV. This amount probably includes a radio. TABLE XLVI shows that twenty-four hundred seventy-three, or 82.43 per cent of three thousand, report ownership of a radio in their homes. TABLE XLVII shows the number and per cent of radios reported by class in each school. The strongest indication of the radio as a factor in higher education is the number of students reporting one in their rooms at school. Eight hundred eleven, or 27.03 per cent of three thousand report that they have a radio at school (TABLE

XLVIII). TABLE XLIX shows the same information listed under each school according to class showing the number and per cent of each student body. These radios help to keep both parents and students well informed concerning news events. Colleges and universities might add to the cultural value of the radio by introducing general courses on choice and appreciation of music.

TABLE L shows the number and per cent of students reporting ownership, in the home, of one or more automobiles by sex. It is interesting to note that four hundred ninety-four out of three thousand report no automobiles. Fifteen hundred seventy-nine report ownership of one automobile. The remaining number of students report two or more.

TABLE LI shows the information by class in each school with the per cent of each student body and total classification per cent based on three thousand. Grand total is recorded at the right side of the page. About ten per cent of students in these schools own automobiles according to TABLE LII. TABLE LIII shows a marked decrease in percentage of non-student owners between freshman and senior years. The per cent of student owners of automobiles remains almost constant between freshman and senior years, in spite of the fact that the number of students in each higher class is less than the preceding class. This indicates that automobile ownership is a

positive factor in higher education; however, the economic status of the family may deserve some consideration as the factor behind the automobile.

TABLE LIV shows the number and per cent of each sex that report automobiles for their personal use at school. TABLE LV shows that the per cent of three thousand remains almost constant between freshman and senior years for the group that reported automobiles for their personal use at college or university. Contrary to these data, the group without automobiles for personal use decreased 32.73 per cent of the total in the freshman classification to 11.4 per cent in the senior classification. The automobile use at first appears to be the factor, but since we cannot separate use of the automobile and economic status of the family, it appears that the two combine to form a positive factor in higher education. TABLE LV shows the per cent of students who report automobiles for personal use in college or university correlate closely with TABLE LIII, showing per cent with personal ownership remaining almost constant through all the classes in spite of the decrease of numbers in each class between freshman and senior years. The decrease in the per cent between the freshman and senior classes for persons without a car for their personal use is very marked. It seems that most likely the economic status of the family may be as much a part of the explanation as the automobile.

TABLE LVI shows the number and per cent of students who report different numbers of brothers and/or sisters. This table also shows that two children is the most popular number. Six hundred sixty-five, or 22.17 per cent of three thousand students, report one brother and/or sister in the family. The family with two brothers and/or sisters takes second place with 21.53 per cent of three thousand. This table shows a gradual decrease in the per cent reporting as the number of brothers and/or sisters increase. The large family is by no means a matter of history because fifty-eight report nine brothers and/or sisters, which would make a family of ten children. TABLE LVII shows the same information worked out on the basis of per cent of each school and then the class totals on the basis of the three thousand total. Only two hundred eighty of the entire number are the only child in the family.

TABLE LIX shows the range of estimated family incomes according to school by sex. TABLE LX shows the range of estimated family incomes by class in each school, showing the number and per cent. The salary range of one thousand one to fifteen hundred was reported more times than any other salary range. It was reported three hundred ninety-seven times, or 13.23 per cent of three thousand. The next highest was reported three hundred seventeen times and the next lowest was reported three hundred fifty-five times. One hundred thirty-three reported five hundred dollars family income. One hundred sixty-three reported

five thousand dollars or above.

TABLE LXI shows the number of students reporting brothers and/or sisters in college or university. This table gives the information by sex. Nineteen hundred seventy-eight report no brothers or sisters in college or university. Six hundred fifty-five report one brother or sister in college or university. TABLE LXII shows the same information tabulated according to classification and school. Totals for the different classes are shown on the right side of the page, with the grand total at the extreme right.

Conclusion

This chapter is devoted to the home as a factor in higher education. The many items of information concerning these homes serve to add a new detail to the picture of home life and conditions. To know these items of information enables teachers and administrators to meet the problems of students better. The broken family is almost always a negative factor because the home is most likely to be disorganized. The economic status of the family is also affected. A number of students are helping to support dependents as well as finance themselves in school. The farmer appreciates education as shown by the fact that he was reported more often than any other class of people on the table designed to show profession of parents. Many of the parents of students own all or part of the business

where they work. Such ownership is a decided advantage to students. The home ownership is also a decided advantage to students. They not only have a permanent place to live, but their chance of finishing college is much better. Parents of students are reported for a wide range of rent paid. The city is listed as source of water supply more than all other sources. The six-room home is very popular, but many large homes are listed. Electrical equipment is showing a definite trend in the direction of electrification of the home in keeping with the development of electric power. The radio brings the world's best artists to the homes of more than twenty-four hundred of three thousand. The automobile serves more than twenty-five hundred out of three thousand at the home and many students at school. Neither student ownership nor use of automobile at school seemed to reduce the per cent of successful student automobile owners or users. The farmer has more children in school than any other class or profession. Estimated incomes of families reported covers a wide range. Most students have neither brother nor sister in college. It is probably enough for most people to have one son or daughter in college or university.

CHAPTER V

EDUCATIONAL BACKGROUND OF STUDENTS IN DIFFERENT SCHOOLS

The educational background of every student plays an important part in the conditioning of interests and attitudes toward education as well as many other activities and experiences of life. For this reason, this chapter is devoted to the size and number of elementary and high schools attended by the students, the ages of the entire group of students, and the educational attainments of parents.

TABLE LXIII gives information concerning the size of high schools attended by students in these colleges and universities by the number of teachers employed in different high schools. This table shows the number and per cent of each sex reporting the size of high school according to the number of teachers employed. TABLE LXV gives the same total information according to number in each class of each college and university. This table shows that seven hundred thirty, or 24.33 per cent of three thousand, attended high schools employing between ten and nineteen teachers. Seven hundred fifteen, or 23.83 per cent of three thousand, attended high schools employing under ten teachers. These two numbers include almost 50 per cent of the total number of three thousand.

TABLE LXIV (4) indicates the size of high schools by the number of rooms in each high school building or

buildings. Between ten and nineteen rooms were reported six hundred ninety-five times, or 23.17 per cent of three thousand. Twenty to twenty-nine rooms for the school plant were reported four hundred fifty-four times, or 15.13 per cent of three thousand. Sections one and two of TABLE LXVII give this information according to number and per cent of each class in each school. It also shows the classification totals and per cent of three thousand at the right side of the page. This table shows high schools with under ten rooms reported two hundred seventy-two times, or 9.07 per cent of three thousand. The number and per cent of three thousand reporting the number of rooms in the high school plant decreases as the scale indicating the number of rooms increases. Section two of TABLE LXVII shows that the number reporting more than one hundred seventy rooms in the school plant is seventy-eight, or 2.6 per cent of three thousand.

TABLE LXIV shows the number and per cent of each sex reporting the size of their high school according to enrollment. One hundred twenty, or 4. per cent of three thousand, report one hundred or less attending their high school. Two hundred sixteen, or 7.2 per cent of three thousand, report between one hundred and one hundred forty-nine pupils enrolled in their high school. "The average high school student body for the entire United States was two hundred twelve pupils in 1926, and two hundred thirty-three pupils

in 1928".¹ TABLE LXVIII gives further information concerning the enrollment of high schools attended and shows the number and per cent of students reporting different high school enrollments according to class in each college or university. The enrollment scale is on the left side of the page and the classification totals are on the right side of the page, with the grand totals at the extreme right. The number and per cent listed under each school shows a gradual decrease as the range for enrolled pupils increases. This marked decrease in number and per cent is shown below the three hundred fifty enrollment mark. There are two hundred seventy-nine who report the number above twelve hundred students enrolled in their high schools. Of course this does not mean that there are this many large high schools represented in these student bodies.

TABLE LXIX shows the number of students in the different schools who have attended one or more elementary schools. This table shows that a large number have attended more than one elementary school. The number and per cent are shown on this table according to class in each college or university. TABLE LXX gives the number and per cent of each sex in each school reporting attendance at one or more elementary schools. One thousand seventy-three, or 35.77 per cent of three thousand, report attendance at only one elementary school. Nine hundred thirteen, or 30.43 per cent of three thousand, report attendance at

two elementary schools. Four hundred sixty-eight, or 15.6 per cent of three thousand, report that they have attended as many as three elementary schools. Three hundred six, or 10.2 per cent of three thousand, report attendance at as many as four elementary schools. One hundred seventy-five, or 5.83 per cent of three thousand, report enrollment in five different elementary schools.

TABLE LXXI shows the number of high school pupils who have been enrolled in one or more high schools. This information is tabulated according to sex. The per cent under each school is based on the individual school enrollment, while the per cent in the sex total columns is based on three thousand. More than two thousand of these students have only been enrolled in one high school. There is, however, enough moving from state to state and from sections within the state to justify making some efforts to secure general standards for both elementary and high schools.

TABLE LXXII shows the number and per cent of each student body who have been enrolled in more than one high school by class. The classification totals for each different number of high schools attended are shown at the right side of the page. These numbers vary from six hundred thirteen attending two high schools to fifteen attending five high schools.

Sections one to three of TABLE LXXIII show the age distribution of college and university students according

to each class in the different schools. Section three of this table shows that the average age of freshmen is 18.88 years. The average age for sophomores is 20.66 years. The average age for juniors is 21.32 years and for seniors is 22.52 years. The average age for the entire group of three thousand is 20.85 years. TABLE LXXIV shows the student distribution according to age by sex. Section two of this table shows the average age of 20.71 for male, and 20.19 for female.

TABLE LXXV shows that more than 50 per cent of one or both parents for the entire group of three thousand graduated from high school. Section one of this table shows that the mothers of 14.8 per cent of three thousand and the fathers of 18.93 per cent of three thousand graduated from college. Sections one and two of this table show that mothers of 4.33 per cent of three thousand students and fathers of 11.43 per cent of three thousand students in these schools graduated from university. TABLE LXXVI shows a close correlation between the educational achievements of mothers and fathers.

Conclusion

These data on numbers of teachers, pupils in elementary and high schools, and size of the school plant indicate that a high per cent of students in these schools come from the typical small high school of the United States. As has been said, the number attending

more than one elementary or high school is large enough to justify seeking a national standard for these schools. The ages of students recorded on questionnaires at the different schools correlate with the exception of one school where a high per cent of the students are in teacher training. This marked difference is probably due to a number of experienced teachers being registered as students at the time the questionnaire was given. A high per cent of the students come from homes in which parents have either high school or college training.

CHAPTER VI

INTERESTS AND PURPOSES OF COLLEGE AND UNIVERSITY STUDENTS

This chapter is devoted to interests, purposes, vocational preferences, and other factors that help to motivate faithful effort whatever task one undertakes.

TABLE LXXVII shows the number and per cent by sex in each school who expect to complete their college or university course. Two thousand seven hundred sixty-seven, or 92.23 per cent of three thousand, report that they expect to complete their college or university course. One hundred sixty-five, or 5.5 per cent of three thousand, have no plans to finish their work. TABLE LXXVIII shows the number and per cent of each class in each school who expect to finish their work. Classification totals are on the right side of the page and the grand total is the same as TABLE LXXVII. TABLE LXXIX shows that two thousand four hundred twenty-eight, or 80.93 per cent of three thousand, are preparing for a definite life work. Three hundred ninety-seven, or 13.23 per cent of three thousand, are undecided concerning the type of work they will undertake. This group of students who have made no decision concerning a definite work are distributed throughout all classes of the schools represented in this study (TABLE LXXX).

TABLE LXXXI shows the number and per cent giving reasons for attending different schools according to sex. TABLE LXXXII gives the same information distributed accord-

ing to the number and per cent of each class in each school. Six hundred twenty-one, or 20.7 per cent of three thousand, report economic reasons for making their choice of college or university. One hundred nine, or 3.63 per cent of three thousand, report choice of school because of social advantages. One thousand four, or 33.47 per cent of three thousand, report that their choice was made on the basis of proximity to a particular college or university. This is the largest number offering any definite reason. Three hundred sixty, or 12. per cent of three thousand, selected their college or university because of special departments. One hundred seventy-nine, or 5.97 per cent of three thousand, report choice on the basis of religious atmosphere. In keeping with the tradition that parents do not have much to do with selecting college for their children, only one hundred three, or 3.34 per cent of three thousand, report that their college or university was selected on the basis of parents' choice. Five hundred one, or 16.7 per cent of three thousand, report that their choice was made on the basis of scholastic standing. One hundred twenty-seven, or 5.23 per cent of three thousand, report that recommendation of friends was the basis for their choice. Sixty-four, or 2.13 per cent of three thousand, report loyalty to state university as the reason for their choice. Only five out of the entire number of three thousand report that they selected their school because of athletics.

Sections one and two of TABLE LXXXIII show the distribution of students according to vocational preferences and sex. This table shows that teaching as a vocational preference is reported eight hundred thirty-seven times, or by 27.9 per cent of three thousand students. TABLE LXXXIV (4) gives information concerning vocational choice according to different classes in each school. Only twenty-eight, or .93 per cent of three thousand, report housewife as their vocational choice. This appears to be a definite indication of a continuance of the trend toward economic freedom for women. Some other vocational choices made by different numbers of students in this questionnaire were law, medicine, nursing, pharmacy, research, government service, public service, ministry, business, agriculture, and engineering.

TABLE LXXXV shows purposes of different students for being interested in higher education. Two thousand one hundred sixteen, or 70.53 per cent of three thousand, report pre-professional preparation as a leading factor in influencing them to attend college or university. One hundred eighty-two, or 6.67 per cent of three thousand, attended college or university because they have friends in college. Seven hundred sixty-five, or 25.6 per cent of three thousand, report family desire as the leading factor in interesting them in college or university. Among other reasons, one thousand one hundred thirty-six, or 38.53 per cent of three thousand, report interest in becoming cultured.

One thousand five hundred seven, or 50.23 per cent of three thousand, express interest in becoming useful as one of the motivating purposes leading them to college. Six hundred seventy-four, or 22.41 per cent of three thousand, are interested in preparing for important positions. One thousand two hundred thirty-six, or 41.2 per cent of three thousand, desire to learn the best methods of effective or complete living. One thousand one hundred thirty-six, or 37.87 per cent of three thousand, list the desire to earn more money as being one of the factors which interested them in entering college or university. TABLE LXXXVI shows the same information on purposes of students distributed according to the different classes in each school. The classification totals are at the right side of the page and the grand total is the same as TABLE LXXXV.

TABLE LXXXVII treats the same information according to the basis of the number of each sex in the different schools, then according to the total number of each sex in all schools, and finally according to the total of all students on the basis of three thousand.

TABLE LXXXVIII shows this information according to the number in each class in the different schools. The classification totals are on the right side of the page and the grand total is at the extreme right. The first item indicates definitely that experience in college and university has been an aid to the students in forming definite purposes, or that the students without any special purpose

have dropped out, because there is a high percentage between freshman and senior classes listed under each school recording pre-professional preparation as their purpose. There is also a small increase in per cent in the classification totals recording pre-professional preparation as their purpose. Desire for usefulness is the next item on this table that shows an increase in the per cent between the freshman and senior years.

Conclusion

These data show that a very high per cent of students in these colleges and universities expect to complete their courses. About three-fourths of the entire number indicate that they are preparing for a definite life work. Convenience and location of school have been the strongest factors in the selection of colleges and universities. Teaching is the most popular vocational choice of students in these schools. Pre-professional preparation ranks first in the purposes of students entering college or university. Desire to become useful, desire to become cultured, and desire to make money are the next most popular factors. Preparation for profession and desire to become useful are the two of this list of factors which show an increase in percentage between the freshman and senior years.

CHAPTER VII

RELIGIOUS INTERESTS AND DENOMINATIONAL AFFILIATIONS OF STUDENTS

During the early history of America religion and education went hand in hand. The preacher in the community was often the teacher of the day school. This general plan survived in many places even during the days of the academy. This chapter is devoted to the study of religious interests and church affiliations as factors in college and university education.

Item three on TABLE III gives the number and per cent of students reporting Sunday school experience among other activities. This table shows an increase in the per cent reporting Sunday school membership between the freshman and senior years. The total number that reported this experience was two thousand four hundred eleven, or 80.37 per cent of the entire group. TABLE LXXXIX shows the family denominational affiliation of students in the different colleges and universities listed here. Students list the religious affiliations of their parents in sixteen different denominations. Those most frequently reported were Baptist, Methodist, and Presbyterian. Eight hundred forty-five, or 28.14 per cent of three thousand, report Baptist affiliation. Eight hundred thirty-six, or 27.87 per cent of three thousand, report Methodist affiliation, while seven hundred eleven, or 23.7 per cent of three thousand, report Presbyterian affiliation. TABLE XC shows the family denom-

inational affiliations of the students in each school by class. These three denominations referred to have strong representation in each of the five different schools.

Other denominations have very few representatives in these schools.

TABLE XCI shows the religious interest of students according to sex. Two thousand six hundred twenty-seven, or 87.57 per cent of three thousand, are Christians. Of this total one thousand three hundred forty-nine are men and one thousand two hundred seventy-eight are women. One hundred sixty-two, or 5.4 per cent of three thousand, report that they are not Christians. Of this number one hundred five are men and fifty-seven are women. The third item on this table shows that two thousand six hundred two, or 86.73 per cent of three thousand, report church membership. This number is twenty-five less than the number reporting themselves to be Christians. Item four on this table shows that two hundred eighty-three, or 9.43 per cent of three thousand, report that they are not church members. This number evidently includes one hundred sixty-two non-Christians shown in item two of this table. TABLE XCII shows this same information concerning the religious interests of students according to classification in each school.

Conclusion

These data indicate that a very high per cent of all students in these schools come from homes with denomination-

al affiliations. They further indicate that the Baptist, Methodist, and Presbyterian churches hold the membership of most of the families of students in these schools. These student bodies are predominantly Christian and of these Christians most are church members.

CHAPTER VIII

SUMMARY AND CONCLUSIONS

1. Extra-curricular activities

Extra-curricular activities of college and university students in high school appear to indicate a negative value as far as higher education is concerned. These activities, however, have certain values for the group organizations in the high schools. Extra-curricular activities in college as a rule show a positive value.

2. Expenses

Information concerning expenses at the different schools indicates that many students live at home. This information also seems to indicate that the majority of these students live within the region of the college or university which they attend. The most frequently reported items of expense are those for board and room. Other expense items are distributed over a very wide range. Club membership is listed by only about one-third of the total student group. Fraternity and sorority membership, is indicated also by about one-third of the entire group. How much club membership may overlap with fraternity and sorority membership cannot be determined from these data. It is interesting to note that twenty-seven hundred of this group expect to finish college or university, yet there are one thousand one hundred thirty-seven freshmen

and only four hundred sixteen seniors. This indicates that many are forced to turn from their choice because of lack of funds or other conditions over which they have no control.

3. The home

The economic status of the home as well as the educational attainments of the parents of the family seem to work with other minor factors in favor of general interest in education. These same conditions certainly operate against many young people attending college. The questionnaires for this study have reached only those in college or university.

4. Educational background

The parents of more than 50 per cent of the students in these schools have graduated from high school and about one third of the parents have graduated from college or university. Almost two-thirds of the entire group of students have attended more than one elementary school and almost one-third have attended more than one high school. Attendance in more than one of these schools is probably due to a change of family residence.

5. Interests and purposes

It is complimentary to the youth of today to note that more than 80 per cent of the three thousand reporting have definite plans for their life work and that the

same per cent are preparing for that work. It appears that economic reasons and location of school have prompted more than 50 per cent of the school choices made by students within this group. Teaching leads all other professions as a vocational choice. Professional interests, culture, and learning the art of complete living are the most popular motives of students in these colleges and universities. The gain in interest in professional preparation is complimentary to these schools.

6. Religious interests

More than 80 per cent of these students report Sunday school experience. More than twenty-six hundred of the three thousand are Christians and almost the same number are church members.

7. Recommendations

As for the significance which these findings may have for local institutions no set regulations can be established. Nevertheless, the writer wishes to make the following recommendations: (1) that extra-curricular activities be encouraged; (2) that better aid facilities be provided for needy students who would like to complete their education; (3) that better education for the preservation of the home be made part of college and university curricula; (4) that efforts be made to adopt

national standards for elementary and high schools; (5) that special efforts be made to sustain the fine interest and purposes of students in these schools; and (6) that every possible means be used to preserve these religious interests.

Copy of Questionnaire used.

Directions for filling: As the value depends upon absolute accuracy of every statement, please fill or check each item to give true and accurate information. The facts thus given will be treated as entirely confidential, and you need not put your name anywhere on this paper. So please answer each item with actual facts called for.

1. Check (X) below the main purposes for coming to university or college:
 - a. To prepare for profession or pre-profession_____
 - b. Because my friends have gone to university or college_____
 - c. My family wanted me to go to university or college____
 - d. To become cultured_____
 - e. To make myself as useful as possible in the world_____
 - f. To prepare for an important position_____
 - g. To learn how to live effectively_____
 - h. To prepare myself in order that I might earn money ____
 - i. Other purposes (What?)_____
2. Why did you choose this school?_____
3. Please fill in your age, sex, and name of county and state:
 - a. Age____b. Sex____c. County_____d. State_____
4. Estimate as accurately as possible what it costs you to attend university or college for one year:
 - a. Transportation to and from university or college \$_____
 - b. Room \$_____ g. For fees \$_____
 - c. Board \$_____ h. For clubs \$_____
 - d. Laundry \$_____ i. For fraternities \$_____
 - e. Books \$_____ j. For sororities \$_____
 - f. Tuition \$_____ k. For incidentals \$_____

Total \$_____

5. Do you expect to finish university or college? _____
6. Are you preparing for a definite life work? _____
7. What profession do you prefer? _____
8. Why do you prefer this profession? _____
9. Estimate as accurately as possible the amount of your expenses:
 - a. Earned at school \$ _____ b. During vacation \$ _____
 - c. Borrowed \$ _____
10. Check (X) your university or college class: Special _____:

Freshman _____: Sophomore _____: Junior _____: Senior _____:

Graduate _____.
11. Check (X) below if parents attended high school, university or college:
 - a. Mother attended high school _____ and college _____ university _____
 - b. Mother graduated from high school _____ and college _____ university _____
 - c. Father attended high school _____ and college _____ university _____
 - d. Father graduated from high school _____ and college _____ university _____
12. Fill or check information about parents:
 - a. Mother is _____ living b. Divorced _____ c. Deserted _____
 - d. Father is _____ living e. Divorced _____ f. Deserted _____
13. Do you help support one or more dependents? _____ How many? _____
14. Have you any brothers or sisters in university or college? _____
15. How many different elementary schools have you attended? _____
16. How many different high schools have you attended? _____
17. Are you a Christian? _____ A church member? _____
18. What is your family denominational affiliation? _____
19. What is (or was) the occupation of your father? _____
20. Is (or was) he a partner in the business where employed? _____

21. Is (or was) your father owner of the business in which he works (or worked)? _____
22. Is the family home owned or rented? _____
23. If it is not owned what monthly rent is paid? _____
24. What is the source of water supply for your home? _____
25. How many rooms are in your home or apartment? _____
26. Estimate the value of electrical equipment in your home. _____
27. How many brothers have you? _____ Sisters? _____
28. How many automobiles are owned by your family? _____
29. Do you personally own an automobile? _____
30. Do you have an automobile for your personal use at school? _____
31. Do you have a radio in your home? _____
32. Do you have a radio at university or college? _____
33. How many rooms were in your high school building? _____
34. How many teachers were employed at your high school? _____
35. What was the total attendance at your high school? _____
36. Check (X) below your membership in any of the following and place figures after high school, university and college to indicate the number of years membership on each:
 - a. Boy Scouts _____ years _____ office held _____
 - b. Girl Scouts _____ years _____ office held _____
 - c. Sunday School _____ years _____ office held _____
 - d. Football Team _____ high school _____ university _____
and college _____
 - e. Baseball Team _____ high school _____ university _____
and college _____
 - f. Swimming Team _____ high school _____ university _____
and college _____
 - g. Basketball Team _____ high school _____ University _____
and college _____
 - h. Track Team _____ high school _____ university _____
and college _____

- i. Tennis Team _____ high school _____ university _____
 and college _____
 j. Wrestling Team _____ high school _____ university _____
 and college _____
 k. Debate Team _____ high school _____ university _____
 and college _____
 l. School Orator _____ high school _____ university _____
 and college _____
 m. Band _____ high school _____ university _____
 and college _____
 n. Orchestra _____ high school _____ university _____
 and college _____
 o. What other activities? _____

high school _____ and college _____ university _____

37. Check (X) below the best estimate you can make as to the annual income of your family: \$ 500.00 or less _____

\$ 501.00 to \$1000.00 _____ \$3001.00 to \$3500.00 _____
 \$1001.00 to \$1500.00 _____ \$3501.00 to \$4000.00 _____
 \$1501.00 to \$2000.00 _____ \$4001.00 to \$4500.00 _____
 \$2001.00 to \$2500.00 _____ \$4501.00 to \$5000.00 _____
 \$2501.00 to \$3000.00 _____ Above \$5000.00 _____
